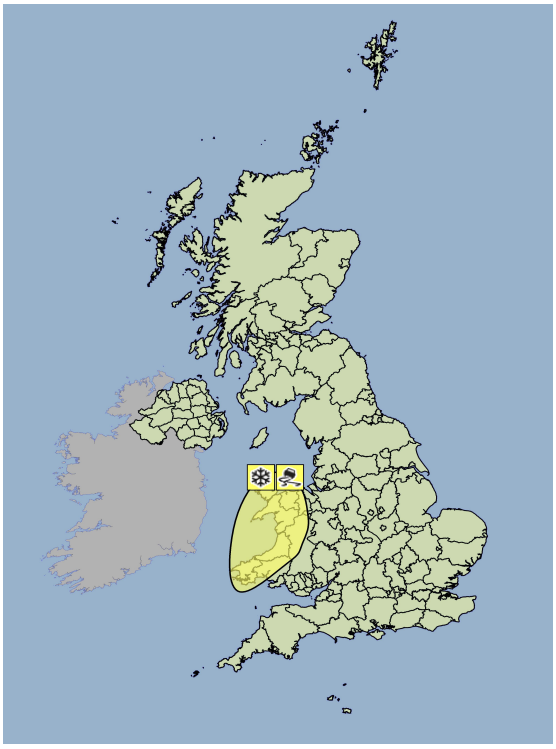
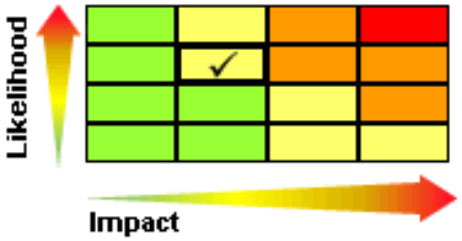
# National Severe Weather Warning Service





**Chief Forecasters Assessment**
A weak frontal zone will bring outbreaks of mainly light sleet and snow to parts of northern, western and mid-Wales during late Sunday evening and the early hours of Monday. Snow is most likely inland where localised accumulations of between 1 and 3 cm could occur. Meanwhile, in coastal areas rain and sleet is more likely than snow. Surfaces which are either untreated or see showers washing off any earlier treatment will readily become icy in these showers.

The Met Office have issued a **Yellow Warning** of **Snow and Ice**

Valid from **21:00 on Sun, 06th Mar 2016** until **09:00 on Mon, 07th Mar 2016**

Outbreaks of mainly light sleet and snow will allow icy patches to form, especially on untreated surfaces and where showers wash off any earlier road treatment. Inland localised accumulations of between 1 and 3 cm could occur.

Please be aware of the potential for difficult driving conditions and slippery surfaces.
